I recommend Arfken & Weber Mathematical Methods for Physicists or Riley, Hobson & Bence Mathematical Methods for Physics and Engineering for this course. Another good book is Mathews & Walker Mathematical Methods of Physics; it covers much the same ground and I find it particularly readable. Contour integration is used only in the lecture notes on Green's functions, as an alternative to the method used in lectures.

The correct form for the part of the expansion containing the doubly repeated root is therefore $(Bx+C)/(x^2)^2$. Using this form and either of methods (i) and (ii) for determining the constants gives the full partial fraction expansion as $x^4/(x+1)(x^2)^2 = \frac{5}{9(x+1)} + \frac{5x^2+16}{9(x^2)^2}$. as the reader may verify.
