What are minibeasts? - BBC Bitesize

Minibeasts have a varied number of legs - anything from none if you are a snail or slug to perhaps 750 if you are certain species of millipede. Minibeasts use these legs to help them crawl. Some minibeasts even jump - a grasshopper can jump up to 10 times its length when it jumps high, and can jump 20 times its length when it jumps long.

Minibeasts for KS1 and KS2 children | Minibeasts homework ...

Quite literally, a 'minibeast' is simply a small animal. Spiders, snails, slugs, beetles, centipedes, worms, earwigs, caterpillars... Those are just a few well-known examples of the thousands and thousands of types of 'creepy-crawlies' that exist all over the world. Officially, minibeasts are called invertebrates which are animals without a backbone, and these are the most numerous type of animal in the world.
