This book aims to provide useful tips for the understanding of scientific research processes and practical advice for people engaged in this field. It is a reflection of the author’s more than 40 years of experience in medical and cancer research, and is written in a colloquial style to reach not only the young audience who are considering devoting their lives to biomedical research, but also to those who are already engaged in this field. The author emphasizes the unique traits and qualifications required for performing scientific research and also describes the different modalities which can be performed in our actual scientific environment. There are numerous practical advices in this book, such as guidelines on writing a grant proposal and the first peer-reviewed manuscript, the selection criteria of the training laboratory and mentors, as well as keeping records of experimental data. The author also provides his insight on the personal inner drive and motivation critical for conducting scientific research, as well as the importance of working on a problem without losing the human perspective of this specific and unique human endeavor.

Why would an audit supervisor in a state tax agency be murdered? Around noon on an average summer day in Sacramento, an ambulance rolls up to the State Capitol, intent on responding to an emergency call from inside the building. Rushing in, they arrive at the Department of Revenue Supervisor’s Office to find the man decline emergency care. Paramedics convince him to allow them to check out his heart rhythm, suspecting problems with his pacemaker. They read his tracing and declare that they need to convert his heart to a normal rhythm. They pull out the defibrillator paddles to try and aid his heart with a single jolt of electric current, but it doesn’t work, and minutes later, he lies dead in his office. Just another heart attack on the job .... or is it? Jill Quint, MD, private forensic pathologist, and vintner, is hired by the family to perform an autopsy on Manuel Valencia, the recently dead man. She has a team of girlfriends that provide her with investigative expertise in accounting, dossier construction, and interview techniques to find the criminal mastermind in any case. The victim was loved by his large extended family, admired by co-workers, and he had just purchased new hiking boots for an upcoming vigorous hike in Yosemite. Both the local coroner and Jill agree it’s a homicide once they look at new findings in the autopsy. The local police enter the case and pursue leads as well. They begin to look at the extensive list of people who have filed complaints against the victim’s tax office., but that leads to thousands of suspects. How does she narrow the list of suspects? What if there are additional victims as well disguised as Manuel Valencia’s death? Read A TAXING DEATH, book 5 in the Jill Quint, MD series.

Today, technology is used to shift, sway and change attitudes and behavior. This creates amazing opportunities and challenges for designers. If we want to create products and services that have the power to educate people so they may live better lives, or help to reduce the time people take to do certain tasks, we first need an understanding of how these people think and work - what makes them "tick" The premise of this book is the need to understand how people "behave"; their habits, motivators and drivers, as a critical way to better understand what a great customer experience for your audience looks like, facilitating better design decisions. The book will lead you from understanding behavior, to extracting customer insights that can launch you into the design of something that makes a difference to people’s lives - all presented in a fun, practical and non-academic way.
