Examining the neurological system is different in young children compared with older children and adults. The components of the complete exam are extensive and usually cannot be performed in a classical fashion. This approach may be carried out on a cooperative school-aged child – but always be mindful of keeping the examination fun.

The neurological exam consists of the: 1) Motor Exam 2) Sensory Exam 3) Reflex Exam. Of note, the major nerve roots to examine include L4, L5 and S1 as they are the most commonly affected. Therefore, we will focus on these three roots as well for each neurological exam. Click this link to jump to the section on the neurological exam in the video.

Low Back Exam, Approach to | Stanford Medicine 25 ...

While testing muscle strength, it is important to keep in mind anatomic information such as which nerves, nerve roots, and brain areas control each muscle and to allow this information to guide the exam. Also compare proximal versus distal weakness because these features can sometimes suggest muscle versus nerve disease, respectively.

Neuroexam.com - Strength of Individual Muscle Groups

Like all other aspects of the physical exam, there is a wealth of information that can be obtained from the neurological examination, provided that it is done carefully and accurately.This is, of course, predicated on learning how to do it correctly. A few practical considerations/suggestions:

The Neurological Examination - University of California ...

For the ability to sense a sharp object, the best screening test uses a safety pin or other sharp object to lightly prick the face, torso, and 4 limbs; the patient is asked whether the pinprick feels the same on both sides and whether the sensation is dull or sharp.

How to Assess Sensation - Neurologic Disorders - Merck ...

In the neurological exam above all others, inspection is vital. Introduce yourself with a (careful) hand shake. This may provide the first clue to diagnosis: Unable to see your hand (neglect, blindness) Unable to lift their hand to shake yours (paralysis, weakness) Unable to easily release your hand (myotonic dystrophy) Overall inspection
