Ant Anstead's Building a Special brings the Haynes story full circle, coming 61 years after the original Building a 750 Special was written by John Haynes, Haynes Publishing's founder, when he was still a schoolboy. This book is a TV tie-in, following the 12-part TV series Ant Anstead Master Mechanic, aired on Motor Trend, part of the Discover Network in the US and UK, following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special'. Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal.

This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.

Approaches the subject of physics from a contemporary viewpoint, integrating the Newtonian, relativistic and quantum description of nature. The text covers all the traditional topics of physics with greater emphasis on the conservation laws, the concepts of field and waves and the atomic view of matter.

Haynes manuals are written specifically for the do-it-yourselfer, yet are complete enough to be used by professional mechanics. Since 1960 Haynes has produced manuals written from hands-on experience based on a vehicle teardown with hundreds of photos and illustrations, making Haynes the world leader in automotive repair information.

Steers buyers through the the confusion and anxiety of new and used vehicle purchases like no other car-and-truck book on the market. "Dr. Phil," along with George Iny and the Editors of the Automobile Protection Association, pull no punches.

The McLaren racing team takes readers inside the organization that makes and drives the fastest cars on the planet. With a brand new \$300 million track opening in the 2012 season in Austin, Texas, the time has never been ribter to learn the Art of Racing with McLaren. In the world of Formula One, the name McLaren is synonymous with precision, professionalism, and speed, but most of what the public knows about McLaren takes place on the raceway and in the pit stops. Focusing not just on champion drivers Lewis Hamilton and Jenson Button, Grand Prix action and the race-day engineers, but the vast team of experts it takes to bring this global brand to the races, this lavishly illustrated book takes readers behind the scenes at the £40M Norman Foster-designed McLaren Technology Centre to capture not just the people and the cars, but the testing and technology behind the world's most successful F1 team. Granted unprecedented access to the inner workings of McLaren on and off the race-track, photographer Darren Heath and F1 xpert Maurice Hamilton trace the evolution of a racing car from the moment of conception on the computer screen to the final race at the end of the season. The story they tell is as colorful and exciting as a Grand Prix itself.
