Multitenant Architecture (CDB) that includes zero, one, or many customer-created pluggable databases (PDBs). A PDB is a portable collection of schemas, schema objects, and nonschema objects that appears to an Oracle Net client as a non-CDB.

Overview of Configuring and Managing a Multitenant Environment

This Oracle Database: Managing Multitenant Architecture course covers all aspects of the multitenant architecture, providing detailed information on the components of an Oracle multitenant container database and its regular and application pluggable databases.

Read Book Oracle Database 12c Managing

In the Oracle Database 12c multitenant architecture, a CDB with multiple PDBs shares a common instance and operating system resources and PDBs can be managed as standalone databases. And with the common and local users, roles, and privileges for CDBs and PDBs, database management activities can be performed seamlessly and transparently.

Multitenant Database Management |
Oracle Magazine

Starting in Oracle Database 12 c, the Oracle Multitenant option enables you to consolidate data and code without altering existing schemas or applications. The PDB/non-CDB compatibility guarantee means that a PDB behaves the same as a non-CDB as seen from a client connecting with Oracle Net.
