4 ORDINARY DIFFERENTIAL EQUATIONS FOR ENGINEERS determines the solution. More generally, it will be shown in the future that given  $a, b$  there is a unique solution  $y$  of the differential equation with the

initial condition  $y(a) = b$ . Geometrically, this means that the one-parameter family of curves  $y = x + \dots$

The first solution with  $x > 0$  of the equation  $\sin 2x = 1/4$  places  $2x$  in the interval  $(\pi/2, 3\pi/2)$ , so to invert this equation using the arcsine we need to apply the identity  $\sin(\pi - x) = \sin x$ , and rewrite  $\sin 2x = 1/4$  as  $\sin(\pi - 2x) = 1/4$ . The solution of this equation may then be found by taking the arcsine, and is.

Differential equations with boundary-value problems | Zill ...

In mathematics, an ordinary differential equation (ODE) is a differential equation containing one or more functions of one independent variable and the derivatives of those functions. The term ordinary is used in contrast with the term partial differential equation which may be with respect to more than one independent variable.
