Mainline science rejects the paranormal because it cannot be proven by the classical methods of controlled experiments. But sciences such as geology, astronomy, and anthropology also don't rely on laboratory testing for repeatable results. Moreover, psi concerns consciousness, which is by definition nonquantitative. "Psi researchers must stop acting like science's poor relations," says author Lawrence LaShan, "limiting themselves to controlled experiments such as analyzing statistics of people guessing cards being flipped in the next room" This provocative book outlines the principles of making a real

study of the large, exciting events — clairvoyance and precognition; mediumship and spirit controls; psychic healing — that would bring mainline science into and revitalize the whole field. "And the issue is not just academic," says LeShan. "The old, materialistic worldview has not worked. Psychic research," he argues, "can transform our sense of reality itself to offer a new and more hopeful picture of ourselves and of the world."

Television, the movies, and computer games fill the minds of their viewers with a daily staple of fantasy, from tales of UFO landings, haunted houses, and communication with the dead to claims of miraculous cures by gifted healers or breakthrough treatments by means of fringe medicine. The paranormal is so ubiquitous in one form of entertainment or another that many people easily lose sight of the distinction between the real and the imaginary, or they never learn to make the distinction in the first place. In this thorough review of pseudoscience and the paranormal in contemporary life, psychologist Terence Hines teaches readers how to carefully evaluate all such claims in terms of scientific evidence. Hines devotes separate chapters to psychics; life after death; parapsychology; astrology; UFOs; ancient astronauts, cosmic collisions, and the Bermuda Triangle; faith healing; and more. New to this second edition are extended sections on psychoanalysis and pseudopsychologies, especially recovered memory therapy, satanic ritual abuse, facilitated communication, and other questionable psychotherapies. There are also new chapters on alternative medicine, which is now marketed in our drug stores, and on environmental pseudoscience, with special emphasis on the evidence that certain technologies like cell phones or environmental agents like asbestos cause cancer. Finally, Hines discusses the psychological causes for belief in the paranormal despite overwhelming evidence to the contrary. This valuable, highly interesting, and completely accessible analysis critiques the whole range of current paranormal claims. Terence M. Hines (Pleasantville, NY) is professor of psychology at Pace University, and the author of the first edition of *Pseudoscience and the Paranormal*.

scientists, that there is no such thing as ' the paranormal ' . But are they right? In this illuminating and often provocative analysis, Robert McLuhan examines the influence of Randi and other debunking sceptics in shaping scientific opinion about such things as telepathy, psychics, ghosts and near-death experiences. He points out that scientific researchers who investigate these things at first hand overwhelmingly consider them to be genuinely anomalous. But this has shocking implications, for science, for society and for even perhaps for ourselves as individuals. Hence the sceptics ' insistence that they should rather be attributed to fraud, imagination and wishful thinking. However, this extraordinary and little understood aspect of consciousness has much to tell us about the human situation, McLuhan suggests. And at a time when militants are polarising the debate about religion, its mystical, spiritual element offers an optimistic and enlightened way forward. Randi ' s Prize is aimed at anyone interested in spirituality or those curious to know the truth about paranormal claims. It ' s an intelligent and readable analysis of scientific research into the paranormal which, uniquely, also closely examines the arguments of well-known sceptics.

Use Scientific Research for Empowerment, Growth, and Success Sweep illusions away and use your mind for what it was intended: to lift human consciousness to a higher level and make this world a better place for you and future generations. Yet, as statistics show, the paranormal is still an endless source of fascination for people around the world. This collection of critical essays and investigative reports examines virtually every area of fringe science and the paranormal from a refreshingly scientific and clear-minded viewpoint. The authors are noted scientists, philosophers, psychologists, and writers. All bring to the task a determination to sift sense from nonsense and fact from fiction in an area notorious for misinformation, misperception, self-delusion, and wishful thinking. They do so in a way that highlights the differences between real science and pseudoscience. They've made special efforts first to find the actual facts behind numerous claims that have popular appeal, and then to explain and communicate what scientific investigation and reasoning reveal about them. Subjects treated to incisive and entertaining examination include astrology, ESP, psychic detectives, psychic predictions, parapsychology, remote-viewing, UFOs, creationism, the Shroud of Turin, coincidences, cult archaeology, palmistry and fringe medicine. There are also explorations of the implications of paranormal beliefs for science education. Informative and fascinating.
