To calculate PLS, the percentage of pure seed is multiplied by the percentage of germination, and the product is divided by 100. For example, 85% pure seed x 72% germination / 100 = 61% PLS. To determine how much seed to plant, divide the percentage PLS into 100. Thus, in this example,  $100/61 = 1.6$ .

## Turfgrass Seed and Seed Mixtures - Penn State Extension

Before I implemented the GRASS Math Problem Solving strategy in my classroom, I was getting incomplete answers. Now that my students have a structure to follow their answers are more detailed and focused. GRASS is an acronym that stands for: Given, Required, Application, Solution, Statement. Given – What information are you given in the word problem? I have students rewrite the information ...

## Math - The Grass Strategy - 2 Peas and a Dog

GPA = GPM (per nozzle) x 5940 mph x W Where: GPA = gallons per acre GPM = gallons per minute mph = miles per hour W = Nozzle spacing (in inches) 5940 = constant for the conversion to GPA With this formula, it does not matter how many nozzles you have, as long as they all work properly. A Method to Calculate Speed.
