The Predictive part: Commonly used statistical techniques to predict future behavior.

The Modelling part: Data mining of relevant predictors (variables) for a statistical model. Data Integration is the key activity required to bring disparate sources of data into one place. These efforts are often underrated in the amount of time and thought it takes to pull these sources together.

A New Way for Predictive Data Mining

Data mining is a hot technology, and this short, authoritative guide shows how it works and why it is gaining ground in the worlds of finance, manufacturing, marketing, and health care. The book begins by exploring the links between "big data"--the data warehouse built up of multiple databases--and traditional statistics.

Definition of Predictive Data Mining The primary objective of predictive mining is to predict future results instead of current behaviour. It involves the supervised learning functions used for the prediction of the target value. The methods fall under this mining category are the classification, time-series analysis and regression.
