Basic Principles of Sterilisation by Heat: Moist heat is more effective than dry heat by sterilising at a lower temperature in a given time, or in a shorter time at a given temperature. Moist heat kills the microorganisms by coagulating and denaturing their enzymes and their structural proteins, a process in which the water participates.

Sterilisation and Disinfection: Methods and Principles ...

The autoclave Define the principles of sterilization with an autoclave and with a dry heat oven. An autoclave sterilizes using high pressurized steam heat that is made by high temperature boiling water and pressure. The steam vibrations destroy the microorganisms.
