Leontin Karl Grafmüller explores how companies can better manage co-creation in the B2B high-tech domain. Co-creation is an active, creative and social collaboration process between customers and providers, in which customers become active participants in innovation processes of a firm to jointly develop new products. The co-creation of high-tech products poses several challenges related to high product complexity such as the time intensity or incorrect specifications. The author investigates this topic from different angles and showcases how the challenges involved are faced to enhance both the efficiency and efficacy of the co-creation of high-tech products in the B2B domain.

This book contains the proceedings of the fib Symposium " High Tech Concrete: Where Technology and Engineering Meet " , that was held in Maastricht, The Netherlands, in June 2017. This annual symposium was organised by the Dutch Concrete Association and the Belgian Concrete Association. Topics addressed include: materials technology, modelling, testing and design, special loadings, safety, reliability and codes, existing concrete structures, durability and life time, sustainability, innovative building concepts, challenging projects and historic concrete, amongst others. The fib (International Federation for Structural Concrete) is a not-for-profit association committed to advancing the technical, economic, aesthetic and environmental performance of concrete structures worldwide.

The proven Glannon Guide is a user-friendly study aid to use throughout the semester as a great supplement to (or substitute for) classroom lecture. Topics are broken down into manageable pieces and are explained in a conversational tone. Chapters are interspersed with hypotheticals like those posed in the classroom that include analysis of answers to ensure thorough understanding. Additionally, " The Closer " questions pose sophisticated hypotheticals at the end of each chapter to present cumulative review of earlier topics. More like classroom experiences, the Glannon Guide provides you with straightforward explanations of complex legal concepts, often in a humorous style that makes the material stick. The user-friendly Glannon Guide is your proven partner throughout the semester when you need a supplement to (or substitute for) classroom lecture. The material is broken into small, manageable pieces to help you master concepts. Multiple-choice questions are interspersed throughout each chapter (not lumped at the end) to mirror the flow of a classroom lecture. Correct and incorrect answers are carefully explained: you learn why they do or do not work. You can rely on authority; the series was created by Joseph W. Glannon?Harvard-educated, best-selling author of, among other legal texts, Examples and Explanations; Civil Procedure, now in its sixth edition. " The Closer " poses a sophisticated problem question at the end of each chapter to test your comprehension. A final " Closing Closer " provides you practice opportunity as well as a cumulative review of all the concepts from earlier chapters. You can check your understanding each step of the way. More like classroom experiences, these Guides provide straightforward explanations of complex legal concepts, often in a humorous style that makes the material stick.

This book describes European and Japanese nontariff barriers (NTBs) in areas of high-technology trade and discusses their impact on the international behavior of U.S. firms. This study was prompted by the rising incidence of nontariff measures in high-technology sectors, as governments increasingly attempt to promote the growth of new industries th

There is now a certain tradition of Anglo-German comparative research on new technology-based firms (NTBFs). Two of the most influential studies in this area have both been sponsored by the Anglo-German Foundation for the Study of Industrial Society (AGF). Starting in 1977, the first AGF project on NTBFs, which was carried out by the consultancy firm Arthur D. Little, has been one of the most important early contributions in this field (Little 1977). This report was the first public document to use the term 'new technology-based firm' and to provide a definition, which despite its operational limitations subsequently became an established term in the literature. More importantly, this study represented one of the first serious attempts to survey the existing stock of this type of firm. The report was critical of the contemporary situation in Europe. (This is a policy area which continues to be hotly debated, see European Commission 1995, Bank of England 1996 and HM Treasury 1998.) It emphasised that, in comparison with the USA, Germany and the UK were each lagging behind if judged by the rate of formation of NTBFs and in their total contribution to the overall economic activity of both countries. In terms of a policy contribution, this study was instrumental in highlighting the lack of support infrastructures for the genesis and growth of high-tech start-ups in two of Europe's leading economies.
