This book aims to provide knowledge on how infrastructure is planned and built in a typical developing country, and what key variables are there in the system limiting the efficient use of public investments in infrastructure. The book begins with a comprehensive literature review on construction and economic development, and trade and economic development. The focus of the book is on the case of Vietnam, with lessons drawn for other developing economies. The book employs the mixed use of data to provide a stronger basis for analysis and interpretation of related government policies. Based on the research findings, the book recommends significant capacity building work for Vietnam to develop capacities that would remove constraints on the efficient use of public investments in infrastructure. The general principles of significant capacity building work which are useful for policy implications are introduced in the book. Analysts, academics, public and private communities in developing countries can adopt the research findings as guiding principles to bring about changes in their current use of public investments in infrastructure, thus supporting their trade and economic growth in the long term.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been cus tomarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Nineteen contributions address the history, taxonomy, ecology, evolution, genetics, physiology, and effects and applications of various the clavicipitalean fungi, including all sexual and asexual relatives that fall within the phylogenetically defined ascomycete family Clavicipitaceae. Contributors.

The fun part of selling yourself, a product or a service is the demonstration or presentation. But the aspect of selling that makes you successful is having the ability to close the sale, get the decision made in your favor, get the check, credit card, purchase order or a signature on an agreement. Closing the sale is where most people balk, feel uncomfortable or even stall. They just can't bring themselves to ask someone for money -- even when the person will receive incredible benefits in exchange for that money. Even worse, people ask for the sale and when the buyer doesn't immediately jump at it, they change the subject and stop the sale themselves. Don't let this happen to you. When done properly, the move into closing the sale is smooth as silk. And when you handle the close as Tom Hopkins teaches you, you'll walk away with more business than you thought you could ever get. Knowledge builds competence and confidence. Become a more confident (and more successful) salesperson. Get started by reading and implementing the strategies in this book. It'll be the best return on your money you've ever gotten!

He's annoyingly gorgeous, provocative, and fast becoming her best friend. But he also has a secret that makes the little hairs on her arms stand on end...It wasn't nicking an expensive watch or diamond bracelet that landed streetwise Jona Montiniere in the clutches of the police. It was a darn sweater. A judge decides that she has to return to her terminally ill mother, that god-awful dragon, who dumped her in an orphanage more than twelve years ago. Worse, for the coming six weeks, she has to do charity work on a strange aun't vineyards in France.Yeah, right. Jona is determined to sneak off at the first chance she gets. But there's still Julian, the dragon's caretaker. Playful, understanding, and sinfully sexy, he's everything she dreams of-but she'd be damned if she let him know and break through her stonewall of protection. And then he awakens her mother from the dead with a simple touch...

Infectious fungal diseases continue to take their toll in terms of human suffering and enormous economic losses. Invasive infections by opportunistic fungal pathogens are a major cause of morbidity and mortality in immuno-compromised individuals. At the same time, plant pathogenic fungi have devastating effects on crop production and human health. New strategies for antifungal control are required to meet the challenges posed by these agents, and such approaches can only be developed through the identification of novel biochemical and molecular targets. However, in contrast to bacterial pathogens, fungi display a wealth of "lifestyles" and modes of infection. This diversity makes it extremely difficult to identify individual, evolutionarily conserved virulence determinants and represents a major stumbling block in the search for common antifungal targets. In order to activate the infection programme, all fungal pathogens must undergo appropriate developmental transitions that involve cellular differentiation and the introduction of a new morphogenetic programme. How growth, cell cycle progression and morphogenesis are co-ordinately regulated during development has been an active area of research in fungal model systems such as budding and fission yeast. By contrast, we have only limited knowledge of how these developmental processes shape fungal pathogenicity, or of the role of the cell cycle and morphogenesis regulators as true virulence factors. This book combines state-of-the-art expertise from diverse pathogen model systems to update our current understanding of the regulation of fungal morphogenesis as a key determinant of pathogenicity in fungi.

A multiplicity of biotrophic micro-organisms interact with plants in nature, forming symbiotic relationships that range from mutualism to antagonism. Microorganisms that have adopted biotrophy as a lifestyle are able to colonize the plant and often to cross the plant cell boundaries by forming intracellular structures that are the site of nutrient uptake/exchange. To establish themselves within plant tissues, both mutualistic and pathogenic biotrophs need to overcome the plant defense response through an exchange of molecular signals. Our knowledge of the nature of these signals and their function in the interaction has rapidly increased over the last few years. This volume focuses on the genetic, molecular and cellular components involved in the communication between partners of well-known symbioses, but also reports on the advances for less studied systems.
