## Will our electricity come from space in the future?**Satellite Power Systems European Space**

The European space power-system technologies used to give the 'Nuna' car its winning edge What happens when the Sun is hidden? Solar power generation is very convenient in space, especially because there are no clouds and the Sun never sets.

### **Satellite Power Systems - European Space Agency**

Combined power and computer system A reliable, ongoing power supply is essential to a space mission's success. The Sun provides around 1.4 kilowatts of power per square metre in Earth orbit - a bountiful resource that spacecraft designers do their very best to take advantage of.

Galileo is a global navigation satellite system (GNSS) that went live in 2016, created by the European Union through the European Space Agency (ESA), operated by the European GNSS Agency (GSA), headquartered in Prague, Czech Republic, with two ground operations centres in Fucino, Italy, and Oberpfaffenhofen, Germany. The €10 billion project is named after the Italian astronomer Galileo Galilei.

## **Galileo (satellite navigation) - Wikipedia**

For over half a century, we have been producing propulsion systems for a diverse range of international satellites and spacecraft. We specialise in monopropellant, bipropellant and electric ion propulsion and supply from component parts and subsystem modules, through to complete propulsion systems and beyond - with a complete range of propulsion support services from delivery, integration & test, and propellant loading, through to launch campaign support, post launch and in-orbit operations.
