Main criteria for current transformer selection. Transformer operated CT/VT meters are measuring on the primary side of distribution transformers. These CTs need to be isolated versus the medium voltage on the primary side. CT operated meter s are connected to the secondary side of the distribution transformer.

We use three types of current transformers that come in all sizes. Split Core CT: A split core CT breaks in half and reattaches. This allows installation within existing, live environments without changing or unplugging wiring. Because there is a break in the coil inside the transformer, they're not considered as accurate as a solid core CT.

The "Current Transformer Wire Length Chart" below lists the maximum total lead wire length ($R_{lead1} + R_{lead2}$) by VA rating for a CT with a 5A secondary. If the distance from the meter is 10 feet, then the total wire length for the chart is 20 feet. Values listed are based on stranded wire, 0.02" meter resistance and 50°C temperature.
