Ships in Scale magazine called our best-selling manual for the first-time kit-builder, Ship Modeling Simplified, a "Bible for the novice modeler." Model Ship Builder said "the only problem with this book is that it should have come out years ago." Now comes the next logical step, a book on building ship models without kits, from Edwin Leaf, past president and resident guru of the prestigious Philadelphia Ship Model Society. Following the proven format of Ship Modeling Simplified, here is the first complete, step-by-step course in building model ships from scratch--everything from

Kits schooners and clipper ships to modern ocean-going freighters and steel warships. This book covers in detail everything the first-time scratch-builder needs to know: choosing the right subject, building from plans, drawing scaled plans from photographs, and buying tools and materials. It also covers building half models, planked hulls, lapstrake hulls, plank-on-frame, plank-on-bulkhead, lift models, modern ships, ancient ships, masting and rigging, sails and flags. Sources and an illustrated glossary are included.

In *Ship Modeling Simplified*, master model builder Frank Mastini puts to paper the methods he's developed over 30 years at the workbench to help novices take their first steps in an exciting pastime. You don't need the deftness of a surgeon or the vocabulary of an old salt to build a model. What you need is an understanding

Kits coach. Mastini leads readers from the mysteries of choosing a kit and setting up a workshop through deciphering complicated instructions and on to painting, decorating, and displaying finished models--with patience and clarity, not condescension. He reveals dozens of shortcuts: How to plank a hull "egg-shell tight"; how to build and rig complicated mast assemblies without profanity; how to create sails that look like sails. . . . And along the way he points out things that beginners usually do wrong--beforehand, not after they've taken hammers to their projects. *Ship Modeling Simplified* even includes an Italian-English dictionary of nautical terms, the key to assembling the many high-quality Italian kits on the American market. Model building is fun, and not nearly as difficult as some experts would have you believe. Here is everything you'll ever need to get started in a hobby that will last a lifetime.

Model ship building does not have to be an expensive hobby. The author of this book takes you on a journey through one of the oldest crafts - nowadays a hobby - and shows you how you can build an end product of fascination, history, skill and value using low-cost materials and a minimum of tools - from scratch in fact. The book begins by explaining hull lines and hull construction methods and then moves on to: masts, yards, booms and gaffs; deck equipment and furniture; anchors; painting; rigging and blocks; armament; simple sail making; mounting and displaying the finished model.

In the past thirty years the world of model kits has undergone a veritable revolution. New techniques in injection moulding have improved the scale accuracy and surface detail of the humble plastic kit, while many specialist companies now produce top-quality resin models, vastly broadening the range of subjects on the market. However, the really radical change has been the advent of photo-etched brass fret, which allows the finest detail to be reproduced to scale. In ship modelling, this has resulted in a new form of the hobby, mid-way between traditional build-from-the-box simplicity and the time-consuming demands of fabricating everything from scratch. These new materials have prompted innovative techniques, which are comprehensively demonstrated in this new manual.
