A comprehensive, yet entertaining look at China's history through a modern lens. For millennia, China was the largest and richest nation on earth. Two centuries ago, however, its economy sank into a depression from which it had not fully recovered—until now. China's modern resurgence as the world's largest nation in terms of population and its second-largest economy—where 800 million people have been lifted out of poverty in the space of a few decades—is the greatest untold story of the 21st century. A Brief History of China tells of the development of a rich and complex civilization where the use of paper, writing, money and gunpowder were widespread in ancient times and where silk, ceramics, tea, metal implements and other products were produced and exported around the globe. It examines the special conditions that allowed a single culture to unify an entire continent spanning 10 billion square kilometers under the rule of a single man—and the unbelievably rich artistic, literary and architectural heritage that Chinese culture has bequeathed to the world. Equally fascinating is the story of China's decline in the 19th and early 20th century—as Europeans and Americans took center stage—and its modern resurgence as an economic powerhouse in recent years. In his retelling of a Chinese history stretching back 5,000 years, author and China-expert Jonathan Clements focuses on the human stories which led to the powerful transformations in Chinese society—from the unification of China under its first emperor, Qinshi Huangdi, and the writings of the great Chinese philosophers Confucius and Laozi, to the Mongol invasion under Genghis Khan and the consolidation of Communist rule under Mao Zedong. Clements even brings readers through to the present day, outlining China's economic renaissance under Deng Xiaoping and Xi Jinping. What really separates this book from its counterparts is the focus on women, and modern themes such as diversity and climate change. Chinese history is typically told through the stories of its most famous men, but Clements' telling gives women equal time and research—which introduces readers of this book to equally important, but less commonly-known facts and historical figures. Often seen in the West in black or white terms—as either a savage dystopia or a fantastical paradise—China is revealed in the book as an exceptional yet troubled nation that nevertheless warrants its self-description as the Middle Kingdom.

The concluding volume—following Mao's Great Famine and The Tragedy of Liberation—in Frank Dikötter's award-winning trilogy chronicling the Communist revolution in China. After the economic disaster of the Great Leap Forward that claimed tens of millions of lives from 1958–1962, an aging Mao Zedong launched an ambitious scheme to shore up his reputation and eliminate those he viewed as a threat to his legacy. The Cultural Revolution's goal was to purge the country of bourgeois, capitalistic elements he claimed were threatening genuine communist ideology. Young students formed the Red Guards, vowing to defend the Chairman to the death, but soon rival factions started fighting each other in the streets with semiautomatic weapons in the name of revolutionary purity. As the country descended into chaos, the military intervened, turning China into a garrison state marked by bloody purges that crushed as many as one in fifty people. The Cultural Revolution: A People's History, 1962–1976 draws for the first time on hundreds of previously classified party documents, from secret police reports to unexpurgated versions of leadership speeches. After the army itself fell victim to the Cultural Revolution, ordinary people used the political chaos to resurrect the market and hollow out the party's ideology. By showing how economic reform from below was an unintended consequence of a decade of violent purges and entrenched fear, The Cultural Revolution casts China's most tumultuous era in a wholly new light.

In this concise history of war, Jeremy Black ranges widely, giving due attention to non-western as well as western traditions. The history of war is inextricably bound to the history of the world. Through a detailed exploration of 'world-scale' issues of warfare, presented within a chronological framework that spans human history, Jeremy Black skillfully illustrates this fact whilst providing the reader with other astute insights and compelling interpretations of war. War: A Short History is a dramatic move away from the formulaic, western approach to military history. Too narrow in its focus on wars specific to the west and too simple because of an over-reliance on a technologically-deterministic reading of warfare, this approach has been rejected by Jeremy Black in favour of a global model that takes all factors into account when considering the strengths and weaknesses of a particular military tradition. This is a book that is as important for its relevance to current world issues of conflict as it is for its thorough consideration of a monumentally significant aspect of human history. http://history.black.continumbooks.com

New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, Sapiens integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.
