developing a new simulation for pedestrian activity in Singapore. The tool demonstrates a new way for agencies to work together and model the relationship between different urban parameters such as land use, mobility, livability, sustainability, and innovation in real-time.

Get Free Simulation Of Urban Lity By Changing Places - Urban Intervention Simulation

The urban region development simulation helps to understand large scale consequences of spatial planning decisions in a complex urban system (e.g. urban growth and densification as effect of zoning, tax regulations or traffic

Get Free Simulation Of Infrastructure By development).

Interactive control of proposed planning interventions and associated impacts generated by these interventions assist the public interactively engaging in planning processes and contributing to planning decisions.
