Brannan The approach used is that a
geometry is a space together with a
set of transformations of that space
(as argued by Klein in his Erlangen
programme). The authors explore
various geometries: affine, projective,
inversive, non-Euclidean and
spherical.

This book is based upon lectures given in German during the 1898-1899 school year by the renowned mathematician David Hilbert. This is the English translation published in 1902. The purpose of this book was to clarify the geometry of Euclid for the modern era when multiple consistent geometries were discovered based upon differing approaches to parallel lines.
