conventional PI speed controller. A Soft computing technique – Fuzzy logic is proposed here for better speed control of induction motor with minimum loss. Fuzzy logic control method has the ability to handle errors in control operation with system nonlinearity and its performance is less affected by system parameter variations.

Fuzzy Logic Based Speed Control System "Comparative Study "

BLDC motor has very vast speed range but its speed control is difficult. In literature, there are many control techniques reported to control speed. This paper presents FUZZYSMC based speed control of BLDC motor, by combining the beneficial features of both sliding mode control and fuzzy logic. This design is compared with PI controller.
