With this fully revised fourth edition, Dr Stahl returns to the essential roots of what it means to become a neurobiologically empowered psychopharmacologist, expertly guided in the selection and combination of treatments for individual patients in practice.

With this fully revised fourth edition, Dr Stahl returns to the essential roots of what it means to become a neurobiologically empowered psychopharmacologist, expertly guided in the selection and combination of treatments for individual patients in practice. Embracing the unifying themes of 'symptom endophenotypes', dimensions of psychopathology that cut across syndromes, and 'symptoms and circuits', every aspect of the text has been updated to the frontiers of current knowledge, with the clarity of explanation and illustration that only Dr Stahl can bring. Integrating much of the basic neuroscience into the clinical chapters, and with major additions in the areas of psychosis, antipsychotics, antidepressants, impulsivity, compulsivity and addiction, this is the single most readily readable source of information on disease and drug mechanisms. This remains the essential text for all students and professionals in mental health seeking to understand and utilize current therapeutics, and to anticipate the future for novel medications.

This is a spin-off from Stephen M. Stahl's new, completely revised and updated version of his much-acclaimed Prescriber's Guide, covering drugs to treat depression.

This fully updated Seventh Edition, includes nine new drugs, and remains the indispensable guide for all mental health prescribers.

With the range of psychotropic drugs expanding and the usages of existing medications diversifying, we are pleased to present this very latest edition of what has become the indispensable formulary in psychopharmacology. This new edition features seven new compounds as well as information about several new formulations of existing drugs. In addition, many important new indications are covered for existing drugs, as are updates to the profiles of the entire content and collection, including an expansion of the sections on long-acting injectable formulations of antipsychotics. With its easy-to-use, template-driven navigation system, The Prescriber's Guide combines evidence-based data with clinically informed advice to support everyone who is prescribing in the field of mental health.

Following the success of the first collection of Stahl's Case Studies, published in 2011, we are pleased to present this completely new selection of clinical stories. Designed with the distinctive user-friendly presentation readers have become accustomed to and making use of icons, questions/answers and tips, these cases address complex issues in an understandable way and with direct relevance to the everyday experience of clinicians. Covering a wide-ranging and representative selection of clinical scenarios, each case is followed through the complete clinical encounter, from start to resolution, acknowledging all the complications, issues, decisions, twists and turns along the way. The book is about living through the treatments that work, the treatments that fail, and the mistakes made along the journey. This is psychiatry in real life - these are the patients from your waiting room - this book will reassure, inform and guide better clinical decision making. Optional posttests with CME credit are available for a fee (waived for NEI members). For more information, contact the Neuroscience Education Institute.

This book features one hundred and fifty updated self-assessment questions designed to help the reader prepare for ABPN examinations and achieve CME and MoC credits towards reaccreditation.

A spin-off of the best-selling Stahl's Prescriber's Guide, covering the most important drugs for treating patients with psychotic illness.

Dr Stahl's books occupy a central position as core educational resources in the psychopharmacology literature. Building on Dr Stahl's exceptional ability to communicate complex principles and make them easily understandable, this book offers 150 self-assessment questions derived from the Neuroscience Education Institute's Master Psychopharmacology Program. The self-assessment questions will help the reader to identify areas of competence or the need for further study and offers CME credit. In addition, the questions themselves are learning exercises: each question is followed by a thorough explanation of the correct and incorrect answer choices. Readers can work through the questions to prepare for formal tests, including American Board of Psychiatry and Neurology examinations and to achieve MoC credits towards ongoing ABPN re-accreditation. The questions are also ideal training tools for those working in related clinical fields and in industry.

Supplement to Stahl's essential psychopharmacology: neuroscientific basis and practical application / Stephen M. Stahl.

Stahl's Essential Psychopharmacology has established itself as the preeminent source of education and information in its field. This much-expanded third edition relies on advances in neurobiology and recent clinical developments to explain the concepts underlying drug treatment of psychiatric disorders. New neurotransmitter systems; theories on schizophrenia; clinical advances in antipsychotic and antidepressant therapy; coverage of attention deficit disorder and drug abuse; and new coverage of sleep disorders, chronic pain, and disorders of impulse control. The fully revised text is complemented with many new, instructive and entertaining illustrations, their captions may be used independent of the main text for a rapid introduction to the field or for review. This edition will be indispensable for students, scientists, psychiatrists, and other mental health professionals, enabling them to master the complexities of psychopharmacology and to plan treatment approaches based on current knowledge. Accreditation and Credit Designation Statements The Neuroscience Education Institute is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. The Neuroscience Education Institute designates this educational activity for a maximum of 90.0 AMA PRA Category 1 Credits(tm).
