After creating my LED Lego Octopus, I decided to put a SteamPunk theme on my next one. This Lego Octopus is similar to my last one but I was able to streamline the wiring process a bit. I also added Lego Technic gears and 18k gold paint to give it the SteamPunk aesthetic. I used orange LED lights this time instead of the RGB LEDs.

Step-by-step instructions show how to build detailed LEGO models of neighborhoods - complete with homes, stores, restaurants, barbershops, and more. Enter the fantastical world of model building. The LEGO Neighborhood Book 2 is a full-color guide to creating intricate, bustling LEGO neighborhoods, and cities. In this second volume, a follow up to the runaway best-selling first volume, you'll learn even more ways to create classic architectural styles using only LEGO bricks. In addition to creating entire buildings, LEGO model-building experts Brian and Jason Lyles also show you how to create interesting architectural features like cornices, false fronts, porches, and

detailed interiors and furniture. With instructions for three buildings and many smaller builds, *The LEGO Neighborhood Book 2* is sure to provide hours of building fun and inspiration for readers of all ages.

Steampunk, the retro-futuristic cultural movement, has become a substantial and permanent genre in the worlds of fantasy and science fiction. A large part of its appeal is that, at its core, Steampunk is about doing it yourself: building on the past while also innovating and creating something original. VanderMeer's latest book offers practical and inspirational guidance for readers to find their individual path into this realm. Including sections on art, fashion, architecture, crafts, music, performance, and storytelling, *The Steampunk User's Manual* provides a conceptual how-to guide that motivates and awes both the armchair enthusiast and the committed creator. Examples range from the utterly doable to the completely over-the-top, encouraging participation and imagination at all levels.

Since the "Automatic Binding Bricks" that LEGO produced in 1949, and the LEGO "System of Play" that began with the release of Town Plan No. 1 (1955), LEGO bricks have gone on to become a global phenomenon, and the favorite building toy of children, as well as many an AFOL (Adult Fan of LEGO). LEGO has also become a medium into which a wide number of media franchises, including Star Wars, Harry Potter, Pirates of the Caribbean, Batman, Superman, Lord of the Rings, and others, have adapted their characters, vehicles, props, and settings. The LEGO Group itself has become a multimedia empire, including LEGO books, movies, television shows, video games, board games, comic books, theme parks, magazines, and even MMORPGs. *LEGO Studies: Examining the Building Blocks of a Transmedial Phenomenon* is the first collection to examine LEGO as both a medium into which other franchises can be adapted and a transmedial franchise of its own. Although each essay looks at a particular aspect of the LEGO phenomenon, topics such as adaptation, representation, paratexts, franchises, and interactivity intersect throughout these essays, proposing that the study of LEGO as a medium and a media empire is a rich vein barely touched upon in Media Studies.

Steampunk is more than a fandom, a literary genre, or an aesthetic. It is a research methodology turning history inside out to search for alternatives to the progressive technological boosterism sold to us by Silicon Valley. This book turns to steampunk's quirky temporalities to embrace diverse genealogies of the digital humanities and to unite their methodologies with nineteenth-century literature and media archaeology. The result is nineteenth-century digital humanities, a retrofuturist approach in which readings of steampunk novels like William Gibson and Bruce Sterling's *The Difference Engine* and Ken Liu's *The Grace of Kings* collide with nineteenth-century technological histories like Charles Babbage's use of the difference engine to enhance worker productivity and Isabella Bird's spirit photography of alternate history China. Along the way, *Steampunk and Nineteenth-Century Digital Humanities* considers steampunk as a public form of digital humanities scholarship and activism, examining projects like Kinetic Steam Works's reconstruction of Henri Giffard's 1852 steam-powered airship, Jake von Slatt's use of James Wimshurst's 1880 designs to create an electric influence machine, and the queer steampunk activism of fans appearing at conventions around the globe. Steampunk as a digital humanities practice of repurposing reacts to the growing sense of multiple non-human temporalities mediating our human histories: microtemporal electricities flowing through our computer circuits, mechanical oscillations marking our work days, geological stratifications and cosmic drifts extending time into the millions and billions of years. Excavating the entangled, anachronistic layers of steampunk practice from video games like *Bioshock Infinite* to marine trash floating off the shore of Los Angeles and repurposed by media artist Claudio Garzón into steampunk submarines, *Steampunk and Nineteenth-Century Digital Humanities* uncovers the various technological temporalities and multicultural retrofutures illuminating many alternate histories of the digital humanities.

In *The Cult of LEGO*, Wired's GeekDad blogger John Baichtal and BrickJournal founder Joe Meno take you on a magnificent, illustrated tour of the LEGO® community, its people, and their creations. *The Cult of LEGO* introduces us to fans and builders from all walks of life. Escher lithographs and a full-scale, functioning LEGO harpsichord. Marvel at spectacular LEGO creations like: –A life-sized Stegosaurus and an 80,000-brick T. Rex skeleton –Detailed microscale versions of landmarks like the Acropolis and Yankee Stadium –A 22-foot long, 350-pound re-creation of the World War II battleship Yamato –A robotic, giant chess set that can replay historical matches or take on an opponent –A three-level, remote-controlled Jawa Sandcrawler, complete with moving conveyor belt Whether you're a card-carrying LEGO fanatic or just thinking fondly about that dusty box of LEGO in storage, *The Cult of LEGO* will inspire you to take out your bricks and build something amazing.

In 1914, Tom Thomson spent the summer at a family cottage on Lake Huron's Georgian Bay, where he taught the ten-year-old daughter, Helen, how to paint. Author Susan Vande Griek and illustrator Pascal Milelli have imagined this time through Helen's eyes, providing an intriguing glimpse into the famous painter's life. Helen and her father greet their visitor on the rocks of West Wind Island. She is fascinated by everything about him — his canoe full of gear, his paint-stained hands, his campfire stew. Over the next few days she watches as Tom paddles off to fish and clambers over the rocks to paint. And then he invites Helen to paint with him — wildflowers blooming near the cottage, boats rocking in the water, pine trees blowing in a storm. And at summer's end, he leaves her with a memento of their time together. The story, told in lyrical free verse, has a quiet charm, while the illustrations capture the natural beauty that inspired some of Thomson's most memorable paintings. An author's note provides more information about Tom Thomson's life.
