There has been an exponential increase in the volume and quality of published research relating to vascular and endovascular surgery in recent decades. Among thousands of articles, a small fraction is truly "game changing." Such studies form the foundations of vascular surgery today and the selection of papers within this book provide the 50 landmark papers every 21st-century vascular and endovascular surgeon needs to know. A valuable reference not only to the established surgeon, but also to vascular surgery residents and trainees, as well as to more experienced surgeons as they continue to learn new techniques and approaches and to improve their knowledge of vascular disorders and treatments. The papers provide an evidence-based resource for those surgeons preparing for professional exams and may inspire clinicians to produce new research. This book serves as a guide for senior trainees preparing for their final professional exams at the end of at least 4 – 5 years of advanced training in an approved plastic and reconstructive surgery training programme. These exams are extremely challenging and difficult to pass, and a knowledge of plastic surgery alone is not enough. Judgement, discipline and the ability to handle the pressure of the exam interactions are key. The book dissects each segment of the exam and presents the common clinical, anatomical and pathological cases that candidates are likely to encounter.

There has been an exponential increase in the volume and quality of published research relating to spine care over the last several decades. Among thousands of articles, a small fraction has been shown to be truly "game changing," forcing the entire field to pause and take notice. These landmark studies may describe a new procedure or surgical approach, evaluate the relative effects of known treatments or techniques, introduce a new classification system, or provide new insights into natural history or disease prognosis. Such studies form the foundations of spine surgery today.This book will be a useful reference not only to the established spine surgeon, but also to neurosurgery and orthopedic residents, as well as to spine surgery fellows as they continue to fortify their knowledge surrounding spinal disorders. Further, this will no doubt serve as a useful evidence-based resource for trainees studying for professional examinations and perhaps most importantly challenge and inspire clinicians to produce high-quality impactful research.
