transformed themselves into an epitome of success by studying and practicing the principles outlined in the book. The book titled Personal Development with Success Ingredients written by Mo Abraham is a step-by-step guide for success, wealth, and happiness and the formula are by far tried and proven. The 12-In-1 book covering over fifty topics on Health & Mental Development, Personal & Social Development, and Financial Development was written with the sole aim of illuminating the minds of those who are disappointed at so-called 'success books' as many of them are only theoretical and somewhat not applicable in a different localized setting and hence, not workable. But Personal Development with Success Ingredients is a book embracing principles which are very much universal and can

be found in virtually everyone. It's also like a whole library of knowledge, wisdom, key secrets and more packed into one book. For those wondering where the real secret of success can be found, it can be surely found in this book. The book was written by Mo Abraham, an experienced entrepreneur who has gained success by applying these same principles in his own life and business. He was a former merchant navy officer who also worked in big telecommunication companies occupying very high positions until he set up his own business in 2003. Like everyone else, Mo Abraham was also faced with the same struggle everyone faced but overcame those using strategic universal laws which he has hidden in the pages of this great book. The principles are affluently assuring and guarantee a life-changing experience. The

magazine articles have been written, quite a few books have been published that have attempted to define ESL, it is still not clear what exactly it entails. However, what seems clear to every one is that the “Register Transfer Level” (RTL) languages are not adequate any more to be the design entry point for today’s and tomorrow’s complex electronic system design. There are multiple reasons for such thoughts. First, the continued progression of the miniaturization of the silicon technology has led to the ability of putting almost a billion transistors on a single chip. Second, applications are becoming more and more complex, and integrated with communication, control, ubiquitous and pervasive computing, and hence the need for ever faster, ever more reliable, and more robust electronic systems is pushing designers towards a

productivity demand that is not sustainable without a fundamental change in the design methodologies. Also, the hardware and software functionalities are getting interchangeable and ability to model and design both in the same manner is gaining importance. Given this context, we assume that any methodology that allows us to model an entire electronic system from a system perspective, rather than just hardware with discrete-event or cycle based semantics is an ESL methodology of some kind.
