What is the future of languages in an increasingly globalized world? Are we moving toward the use of a single language for global communication, or are there ways of managing language diversity at the international level? Can we, or should we, maintain a balance between the global need to communicate and the maintenance of local and regional identities and cultures?

What is the role of education, of language rights, of language equality in this volatile global linguistic mix? A group of leading scholars in sociolinguistics and language policy examines trends in language use across the world to find answers to these questions and to make predictions about likely outcomes. Highlighted in the discussion are, among other issues, the rapidly changing role of English, the equally rapid decline and death of small languages, the future of the major European languages, the international use of constructed languages like Esperanto, and, not least, the question of what role applied scholarship can and should play in mapping and influencing the future.

Erbium is a rare chemical element. A rare, silvery, white metallic lanthanide, erbium is solid in its normal state. Erbium's principal uses involve its pink-coloured ions, which have optical fluorescent properties particularly useful in certain laser applications. This book reviews research on erbium including synthesis, structural and spectroscopic properties of new erbium-based materials; bismuth-based erbium-doped fibre amplifiers; erbium lasers in the treatment of herpes labialis and for surface conditioning in dentistry, among others.

"England may with justice claim to be the native land of transfusion," wrote one European physician in 1877, acknowledging Great Britain ' s crucial role in developing and promoting human-to-human transfusion as treatment for life-threatening blood loss. As news of this revolutionary medical technique spread from professional publications to popular journals and newspapers, the operation invaded the Victorian imagination. Transfusion is the first extended study of this intersection between medical and literary history. It examines the medical discourse that surrounded the real nineteenth-century practice of transfusion, which focused on women suffering from uterine hemorrhage, alongside literary works that exploited the

operation's sentimental, satirical, sensational, and gothic potentials. In the eighteenth century, the term "transfusion" was used to figure aesthetic and religious inspiration as well as erotic and romantic commingling—associations that persisted into the nineteenth century and informed attitudes toward the medical practice of blood transfer and the cultural conception of sympathetic exchange. Exploring transfusion's role in canonical works such as Wells's *The Island of Dr. Moreau* and Stoker's *Dracula*, as well as a surprising array of lesser-known short stories and novels, Kibbie demonstrates the tangled, mutually informing relationship between science and culture. This innovative study traces the creation of a new fluid economy between persons, one that could be seen to forge new forms of intimacy between donors and recipients or to threaten the very idea of personal identity.
