The final step of true physiological birth is the birth of the placenta with the cord still attached to the baby wherever possible (third stage of labour). The baby should remain for at least 30-60 seconds BELOW the level of the mother's abdomen (below the level of the placenta).

What is Physiological Birth? | Spiritual Birth

Psychology of physiological birth Giving birth physiologically is an intense and transformative psychological experience that generates a sense of empowerment. The benefits of this process can be maximized through physical, emotional and social support for women, enhancing their belief in their ability to birth and not disturbing physiology unless it is necessary.

The Psychological Birth of the Adoptive Mother

Overview. Psychology borders on various other fields including physiology, neuroscience, sociology, anthropology, as well as philosophy and other components of the humanities. The history of psychology as a scholarly study of the mind and behavior dates back to the Ancient Greeks. There is also evidence of psychological thought in ancient Egypt.

The pioneering contribution to infant psychology that gave us separation and individuation documents with standard-setting care the intrapsychic process of a child's emergence from symbiotic fusion with the mother toward affirmation of his own psychological birth. Available for the first time in paperback to a new generation of students and clinicians on the twenty-fifth anniversary of its original publication.

"The biological birth of the human infant and the psychological birth of the individual are not coincident in time. The former is a dramatic, observable, and well-circumscribed event; the latter a slowly unfolding intra psychic process." Thus begins this highly acclaimed book in which the author and her collaborators break new ground in developmental psychology and present the first complete theoretical statement of the author's observations on the normal separation-individuation process. Separation and individuation are presented in this major work as two complementary developments. Separation is described as the child's emergence from a symbiotic fusion with the mother, while individuation consists of those achievements making the child's assumption of his own individual characteristics. Each of the sub-phases of separation-individuation is described in detail, supported by a wealth of clinical observations which trace the tasks confronting the infant and his mother as he progresses towards achieving his own individuality.

Looks at such psychological dilemmas as the impact of a woman's emotional attitude on labor and delivery and the psychological effects of pain-killing drugs on mother and child

""This treasurehouse of a book glows with contributions to every fundamental aspect of psychoanalysis. Dr. Pine moves with grace and authority between the worlds of child development and clinical process, between abstract theory and the concrete methods and data of child observation, and between classical psychoanalysis and the varieties of psychoanalytically oriented psychotherapy. His well-chosen clinical examples are models of sensitivity, clarity, and ingenuity. Altogether, a remarkable achievement and a 'must' book for every psychoanalytic reader.""-Roy Schafer

The Christian season of Advent, covering the span of about four weeks prior to Christmas, is rich with religious and psychological significance. In the darkest, shortest days of the year, people turn their thoughts to rebirth and the creation of new light. It is a time for psychic birth guiding us toward wider consciousness and a heightened experience of life. This yearning in human beings goes back to the primal roots of civilization. The prayers and liturgies of the Advent season echo the myths of winter solstice festivals and the ancient desire of people to return to the nurturing chaos of unformed matter. Advent prayers parallel the efforts of alchemists who strove to turn base metal into higher and more noble elements. Advent expresses a fundamental longing for transformation.

In this important new book, the noted theoretician Fred Pine provides a synthesis of the four conceptual domains of psychoanalysis: drives, ego functioning, object relations, and self experience. He argues that a focus on the clinical phenomena themselves, and not on the theoretical edifices built around them, readily illuminates the inevitable integration of the several sets of phenomena in each person's unique psychological organization. With superb clarity, Pine shows how one or another or more of these becomes central to a particular individual's psychopathology. Drawing on a wealth of detailed clinical material -- brief vignettes, process notes of sessions, and full analyses -- he vividly demonstrates how a broad multimodel perspective enhances the treatment process, and is, in fact, its natural form. He also applies these ideas to such crucial clinical issues as preoedipal pathology and ego defect, the so-called symbiotic phase, and the mutative factors in treatment. Conceptually elegant and immensely practical, this highly original work is certain to be, in the words of Arnold Cooper, "a guide for theorists and clinicians for many years to come."
