### **Guideline on Managing Acute Upper Gastrointestinal ...**

Upper gastrointestinal bleeding is gastrointestinal bleeding in the upper gastrointestinal tract, commonly defined as bleeding arising from the esophagus, stomach, or duodenum. Blood may be observed in vomit or in altered form as black stool. Depending on the amount of the blood loss, symptoms may include shock. Upper gastrointestinal bleeding can be caused by peptic ulcers, gastric erosions, esophageal varices, and rarer causes such as gastric cancer. The initial assessment includes measurement

### **Upper gastrointestinal bleeding - Wikipedia**

Upper gastrointestinal bleeding (UGIB) refers to gastrointestinal blood loss whose origin is proximal to the ligament of Treitz at the duodenojejunal junction. Acute UGIB can manifest in a variety of ways, with or without hemodynamic compromise, including haematemesis, coffee-ground emesis, the ...
