Put enough Ninhydrin solution in the tray to cover the bottom and simply lay the document in the solution. Remove the item and lay the item in again, other side down. Remove the item again and allow excess solution to run off into the tray. Place the document on a piece of blotter paper or other clean paper to finish drying.

Ninhydrin Processing | Crime & Clues

A ninhydrin solution is commonly used by forensic investigators in the analysis of latent fingerprints on porous surfaces such as paper. Amino acid containing fingermarks, formed by minute sweat secretions which gather on the finger's unique ridges, are treated with the ninhydrin solution which turns the amino acid finger ridge patterns purple and therefore visible.

Ninhydrin - Wikipedia

Silver nitrate can also be used to detect prints; when applied to paper with distilled water any existing prints will turn black. In 1954, another method for detecting fingerprints started to see use: ninhydrin application. Ninhydrin is a chemical powder that is soluble in ethanol or acetone at room temperature.
