This highly respected text offers students an enjoyable, extraordinarily well-written introduction to the psychology of women with an up-to-date examination of the field and comprehensive coverage of topics. Appropriate for students from a wide variety of backgrounds, Margaret Matlin's THE PSYCHOLOGY OF WOMEN, 7th Edition, accurately depicts women's experiences through direct quotations and an emphasis on empirical research. Known for its balance of scholarship, readability, and inclusion of various kinds of women, the text reflects a genuine interest in and understanding of the readers for whom it was written. This edition is updated to incorporate the most current research, and continues to examine numerous topics that are central to many women's lives but omitted from competing textbooks, including complete chapters on childhood, adolescence, love relationships, motherhood, health psychology, and psychological disorders. Matlin also provides enhanced coverage of such important topics as social class, ethnic diversity, pregnancy, and women's retirement as she continues to lead the way for the psychology of women course. Scholarly engagement with the magazine form has, in the last two decades, produced a substantial amount of valuable research. Authored by leading academic authorities in the study of magazines, the chapters in The Routledge Handbook of Magazine Research not only create an architecture to organize and archive the developing field of magazine research, but also suggest new avenues of future investigation. Each of 33 chapters surveys the last 20 years of scholarship in its subject area, identifying the major research themes, theoretical developments and interpretive breakthroughs. Exploration of the digital challenges and opportunities which currently face the magazine world are woven throughout, offering readers a deeper understanding of the magazine form, as well as of the sociocultural realities it both mirrors and influences. The book includes six sections: -Methodologies and structures presents theories and models for magazine research in an evolving, global context. -Magazine publishing: the people and the work introduces the roles and practices of those involved in the editorial and business sides of magazine publishing. -Magazines as textual communication surveys the field of contemporary magazines across a range of theoretical perspectives, subjects, genre and format questions. -Magazines as visual communication explores cover design, photography, illustrations and interactivity. -Pedagogical and curricular perspectives offers insights on undergraduate and graduate teaching topics in magazine research. -The future of the magazine form speculates on the changing nature of magazine research via its environmental effects, audience, and transforming platforms.

Monthly current affairs magazine from a Christian perspective with a focus on politics, society, economics and culture.

The psychology of women's health is an area traditionally controlled by male-orientated scientists, psychologists and doctors. Women by definition have been unquestioningly seen and treated as deviant from the male norm. This model has been challenged by feminist historians and sociologists but not by psychologists who seem to have implicitly accepted the medical model and emphasised the pathology in women's behaviour and emotions. In this book women's views and their experience of their own health and health care are taken seriously and analysed within a psychological and a feminist angle.

A philosopher subjects the claims of evolutionary psychology to the evidential and methodological requirements of evolutionary biology, concluding that evolutionary psychology's explanations amount to speculation disguised as results. Human beings, like other organisms, are the products of evolution. Like other

organisms, we exhibit traits that are the product of natural selection. Our psychological capacities are evolved traits as much as are our gait and posture. This much few would dispute. Evolutionary psychology goes further than this, claiming that our psychological traits—including a wide variety of traits, from mate preference and jealousy to language and reason—can be understood as specific adaptations to ancestral Pleistocene conditions. In *Evolutionary Psychology as Maladapted Psychology*, Robert Richardson takes a critical look at evolutionary psychology by subjecting its ambitious and controversial claims to the same sorts of methodological and evidential constraints that are broadly accepted within evolutionary biology. The claims of evolutionary psychology may pass muster as psychology; but what are their evolutionary credentials? Richardson considers three ways adaptive hypotheses can be evaluated, using examples from the biological literature to illustrate what sorts of evidence and methodology would be necessary to establish specific evolutionary and adaptive explanations of human psychological traits. He shows that existing explanations within evolutionary psychology fall woefully short of accepted biological standards. The theories offered by evolutionary psychologists may identify traits that are, or were, beneficial to humans. But gauged by biological standards, there is inadequate evidence: evolutionary psychologists are largely silent on the evolutionary evidence relevant to assessing their claims, including such matters as variation in ancestral populations, heritability, and the advantage offered to our ancestors. As evolutionary claims they are unsubstantiated. Evolutionary psychology, Richardson concludes, may offer a program of research, but it lacks the kind of evidence that is generally expected within evolutionary biology. It is speculation rather than sound science—and we should treat its claims with skepticism.

*Feminist Foremothers in Women's Studies, Psychology, and Mental Health* is by and about the more recent wave of feminist foremothers; those who were awakened in the 1960s and '70s to the realization that something was terribly wrong. These are the women who created the fields of feminist therapy, feminist psychology, and women's mental health as they exist today. The 48 women share their life stories in the hope that they will inspire and encourage readers to take their own risks and their own journeys to the outer edges of human possibility. Authors write about what led up to their achievements, what their accomplishments were, and how their lives were consequently changed. They describe their personal stages of development in becoming feminists, from unawareness to activism to action. Some women focus on the painful barriers to success, fame, and social change; others focus on the surprise they experience at how well they, and the women's movement, have done. Some well-known feminist foremothers featured include: Phyllis Chesler Gloria Steinem Kate Millett Starhawk Judy Chicago Zsuzanna Emese Budapest Andrea Dworkin Jean Baker Miller Carol Gilligan In *Feminist Foremothers in Women's Studies, Psychology, and Mental Health*, many of the women see in hindsight how prior projects and ideas and even dreams were the forerunners to their most important work. They note the importance of sisterhood and the presence of other women and the loneliness and isolation experienced when they don't exist. They note the validation they have received from grassroots feminists in contrast to disbelief from professionals. Although these women have been and continue to be looked up to as foremothers, they realize how little recognition they've been given from society-at-large and how much better off their male counterparts are. Some foremothers write about the feeling of being different, not meshing with the culture of the time and about challenging the system as an outsider, not an insider. These are women who had few mentors, who had to forge their own way, "hit the ground running." Their stories will challenge readers to press on, to continue the work these foremothers so courageously started. Throughout the pages of *Feminist Foremothers in Women's Studies, Psychology, and Mental Health* runs a sense of excitement and vibrancy of lives lived well, of being there during the early years of the women's movement, of making sacrifices, of taking risks and living to see enormous changes result. Throughout these pages, too, sounds a call not to take these changes for granted but to recognize that feminists, rather than arguing over picayune issues or splitting politically correct hairs, are battling for the very soul of the world.

This critical examination of the theories, methods and political preoccupations that underpin modern developmental psychology will prove invaluable to students, and all professionals who draw on developmental psychological theories in their work.

Targeted towards the college-aged youth (18-22), the Quarterly primarily serves as a promotional vehicle for the A&F brand. Its contents prominently feature photo spreads by A&F photographer Bruce Weber and also encompass a variety of articles on lifestyle, sex, entertainment, travel, dining, and celebrity interviews. The Quarterly's inclusion of nudity and sexuality has been a continual controversial topic. Positive criticism during its initial American run (1997-2003) called it an ingenious marketing tool, the envy of the publishing world, which "redefined the All-American look for teenagers."
